

Be prepared for over water emergencies. With our Sea Survival and Underwater Escape Training

Customized Sea Survival course

The training provides participants with realistic scenarios in a safe and secure environment, including underwater escape exercises and techniques specially developed for the Dornier 228. The two-day module includes classroom instruction and in-pool exercises in different weather scenarios using a unique cockpit/fuselage training device.

A training close to reality

Our goal in developing this training was to make sure that crews are well prepared for a possible emergency at sea. While theoretical training is important; practical training provides more in-depth insight into the subject matter.

The course offers basic firefighting, survival techniques, and underwater evacuation and revival.

Specially designed courses for pilots and crews

Your Dornier 228 OEM offers pilot and crew training with customized courses designed specifically for the Dornier 228 and your operations to convey best practices in different scenarios and get direct access to the latest technical and operational knowledge and mission-specific procedures of Dornier 228.

This special training was developed and realized in cooperation with Deutsche WindGuard Offshore GmbH, located in the North of Germany.

Are you prepared?

Next Sea Survival and Underwater Escape Training is planned for June 10th/11th and October 16th/17th 2020, register now or contact us to get more insights.
