

Together
ahead. **RUAG**

Ready to support anytime! With our modular MedEvac installations.

Be prepared for any medical emergency situation and help those in need. Our optional MedEvac installations allow you to assure safety of patients as well as medical supplies, staff and crew, in a fast and convenient way.

Safe transport of your patients

The care bed is an easy to adapt system including stretchers, incubators, or patient-isolation-system. The versatile, lightweight, and compact base unit includes oxygen tank, air- and vacuum pumps and a 1000W inverter. Up to two care beds can be fitted into a Dornier 228.

Isolating your patients

The EpiShuttle is a modular, single patient isolation system, protecting both: the patient from a contaminated environment or the environment from an infected patient. It fits over the care bed and provides optimal safety and numerous treatment options during loading and transport of the patient.

Store your medical goods

The ULT Freezer provides a constant ambient temperature of up to minus 86°C for medical goods, e.g. vaccines and laboratory samples. With a capacity of 90 liters, it has a low energy consumption with a compact, silent, and lightweight profile.

Disinfection via UVC Lights

Keep surfaces and the air clean from pathogens thanks to our rapid, contactless, and non-hazardous disinfection lights for your aircraft cabin. Protect your medical crew, passengers, patients, and pilots.
