

Imagine your Dornier 228 with a glass cockpit. Your upgrade kit will feature only those system displays you choose – modular and budget-friendly.

An upgrade to an affordable glass cockpit is within reach. We're so excited about this flight deck solution that we want to make sure the entire Dornier 228 operator community hears about it. What's more, the kit is designed to allow your trusted MRO provider to install it on your behalf.

Enhanced Modular Cockpit Concept (EMCC) – expect savings with ADS-B Out

The truth is, the ADS-B Out avionics configuration makes your EMCC glass cockpit solution more affordable because most of the work is already done. And, modular by definition, the EMCC solution lets you pick and choose which features your glass cockpit should have. You control your flight deck options on your Dornier 228 as well as your budget. Our [factsheet](#) shows you how it works.

Adding value

Choosing to upgrade to a glass cockpit with the EMCC solution improves the value of your Dornier 228 as well as your profitability options. Increased cockpit efficiency reduces the pilot workload and has a direct and positive impact on productivity. You can also expect to save on the time and costs associated with spare parts sourcing and repairs for aging cockpit configurations.

The safety factor

Every EMCC glass cockpit option improves situational awareness, enhances safety and includes full ADS-B Out compliance. State-of-the-art avionics are specifically designed to fit your Dornier 228 so you'll continue to feel confident in your cockpit environment.

Consider the benefits of a glass cockpit. Interested?
