

## Newsflash

### LED encourages restful journey

**LED lighting is more than an investment in cabin interior lighting – state-of-the-art LED technology has the capacity to optimize productivity, contribute to sustainability and enrich the passenger experience. Suiting individual preferences, LED lighting is available in a full range of colour and performance nuances. RUAG’s cabin interior specialists provide reliable professional support, guiding you through the selection process and on to installation.**

#### Blending technology with personal preferences

Your LED lighting choices have a decided influence on all aspects of your aircraft’s cabin interior and they complete the passenger experience. You can rely on RUAG to assist you in the decision making process, offering informed and precise solutions designed to suit your needs and complement your taste.

#### Reducing the effects of jetlag

Today’s LED technology is multitasking at its best. Cabins are brighter, maintenance costs are reduced, lifetime waste is minimised, and design aesthetics are enhanced. Most importantly, the proper illumination mix contributes to passenger well-being, both on and off the aircraft. Recent studies have determined that specially designed, LED aircraft interior lighting profiles can successfully manage human circadian rhythms and fight the effects of jetlag.

#### Optimize your downtimes

Integrating LED lighting solutions into your aircraft interior design is just one way in which RUAG supports your refurbishment requirements. Our one-stop shop provides solutions from a single source, suiting your individual schedule. Our specialists perform all required services from MRO, to cabin refurbishment, system upgrades and painting within one single downtime – effecting faster turnaround times and maximizing your profit options.
