

Newsflash

RUAG Australia achieves Nadcap Accreditation for Non-Destructive Testing – now at Wingfield

Ensure your requirements for non-destructive testing are met in full with RUAG as your Nadcap accredited facility partner.

Approved and available

Rely on RUAG Australia to carry out Fluorescent Penetrant Inspection testing at the highest level to conform to your strict requirements for non-destructive testing in-country. The RUAG facilities at Wingfield, South Australia, are now Nadcap accredited for non-destructive testing. Your approved partner, RUAG continues its successful series of site-specific accreditation on your behalf, adding this achievement to the already successful accreditation at Bayswater, Victoria. RUAG Australia is one of only 500 companies worldwide to hold 4 individual Nadcap accreditations.

Integrate with confidence

Demanding Nadcap standards improve the consistency of product conformance. The need for subsequent auditing activities is significantly reduced, saving you time and expenditure. Secured standards also ensure reliable integration into global supply chains. Recognised as proof of excellence by Aerospace and Defence Prime Contractors, Suppliers and Government Agencies, Nadcap accreditation is a necessary requirement for conducting work in these industry sectors.

Independently accredited

Nadcap accreditation for non-destructive testing is the highest level of industry endorsed certification required in the aerospace sector for both Aerospace and Defence customers. The Nadcap programme, administered by PRI, coordinates input from Prime Contractors to develop industry-wide audit criteria for special processes and products.

Nadcap is an industry-managed approach to conformity assessment that brings together technical experts from both Industry and Government to establish requirements for accreditation, accredit suppliers and define operational programme requirements.
