## Prepare pilots and crews for safe operations. Schedule your next Dornier 228 training.

**Safety first! This is why we continuously develop specifically designed training courses for the Dornier 228 pilots and crew, making sure your operations convey the best practices in different scenarios and get direct access to the latest technical and operational knowledge and mission-specific procedures.**

### Engine Ground Run Training

Safe and successful missions start with an engine system that is in full working condition. Take off with confidence when your Dornier 228 crew verifies a strong, sound engine after a maintenance event. Perform approved system checks on your Dornier 228 engines and safely prepare your aircraft for its next mission. Our Dornier 228 flight test pilots ensure you benefit from OEM knowledge for a thorough Engine Ground Run training and reliable operations.

### Sea Survival Training

Be prepared for over water emergencies. The Customized Sea Survival training provides participants with realistic scenarios in a safe and secure environment, including underwater escape exercises and techniques specially developed for the Dornier 228. The two-day module includes classroom instruction and in-pool exercises in different weather scenarios using a unique cockpit/fuselage training device.

### Maintenance Check Flight Training

Verify adequate maintenance on your own Dornier 228 with highly developed Level A certification training courses for pilots and crews. It features carefully designed modules with both classroom work and in-flight training. The Level A maintenance check flights, according to EASA Regulation 965/2012, Annex VIII, Subpart E, Section 5 MCF, lets you ensure all processes and functions are operating correctly so you are prepared for continuous and safe operations.
